

Description

ETX-1 is an engine control unit especially suited for racing where weight and space are a real concern and the need of integrating is a must.

ETX-1 has four lambda controllers and a data logger embedded in the engine control unit, which includes all the coil drivers, to optimize the space taken and the complexity of the wiring loom.

The system can be expanded by external components via the CAN bus (two High Speed and one Low Speed), allowing the ECU to use their data for logging or computing purposes.

ETX-1 can manage engines up to 6 cylinders (with up to 2 injectors per cylinder) or up to 12 cylinders (with lost spark ignition), 2 Drive-by-Wire systems, 4 UEGO linear lambda controllers with heater control, 2 differential knock sensors, 1 differential input with programmable gain.

All the single ended analog inputs are hardware filtered (160Hz) and sampled with a 12 bit ADC at a sampling rate of 1000 Hz, then digitally filtered with a programmable IIR single pole filter with a different programmable cut frequency for each single input.

The temperature and digital inputs have an integrated 1000 Ohm pull-up to simplify the wiring loom, while the single ended inputs have a 1 MOhm pull-up resistor for diagnosis purposes.

Caratteristiche

- 17 single ended analog inputs
- 4 NTC/PT1000 temperature sensor inputs
- 2 Hall or VRS pick-up inputs
- 8 digital/speed inputs
- 1 digital input
- 6 inductive ignition drivers
- 12 on/off injector or PWM drivers
- 2 H bridges for dc motors (DBW) control
- 4 UEGO lambda controllers
- 2 differential knock inputs
- 512MB memory space for data logging
- sampling rate up to 1000 Hz.
- 3 CAN communication lines (1 LS + 2 HS)
- 1 Ethernet line 10/100 Mbps
- 1 programmable differential input (gain 1-128)
- lap trigger based on digital input or CAN (GPS)
- code load via CAN or Ethernet line

Particolarità

- external data logger not required
- no need for external lambda controllers
- very light and compact design
- Aluminium alloy machined box
- IP67 environmental protection
- high precision timing thanks to the high speed floating point processing unit
- dual processor system
- logged data export capability for most popular data analysis software
- high speed data download using the Ethernet line
- possibility to use NTC and PT1000 temperature sensors on the same vehicle (1kOhm pull-up)
- temperature range for ECU -40..125°C
- temperature range for logger -20..85°C
- flexible and highly customizable firmware
- password access control to several mapping levels
- user definable dashboard channel table via CAN bus (max 40 packets @ 200Hz)

Electric characteristics

• Hall/VRS pick-up inputs		2
• Analog inputs		17
• Digital inputs		1
• Digital/frequency inputs		8
• NTC/PT1000 temperature sensor inputs		4
• Internal temperature sensors		2
• Knock sensor inputs		2
• Differential input (gain1-128)		1
• UEGO lambda controllers		4
• Inductive ignition drivers (max 20A)		6
• Injector/PWM outputs (max 4A)		12
• H bridges (max 6A)		2
• PWM max frequency	[kHz]	20
• Lambda heaters outputs (max 4A)		4
• 5Vdc reference voltage outputs		4
• High Speed CAN lines		2
• Low Speed CAN line		1
• Ethernet line (10/100Mbps)		1
• Minimum power supply	[V]	6
• Maximum power supply	[V]	18

Mechanic characteristics

• Height	[mm]	40
• Length (without connectors)	[mm]	137
• Depth	[mm]	93
• Weight	[g]	550
• Minimum temperature	[°C]	-20
• ECU maximum temperature	[°C]	125
• Logger maximum temperature	[°C]	85
• Environmental protection		IP67

Data logger characteristics

• FLASH memory	[MB]	512
• Maximum logged channels		1023
• Maximum logging rate	[kB/s]	100
• Maximum sampling rate	[Hz]	1000
• Maximum CAN transmission rate	[kB/s]	64
• Maximum number of CAN packet		40
• Maximum CAN transmission rate	[Hz]	200
